

Proof packet for one AI-built app, repo, or public PR.

\$149

WRITTEN ASYNC

A fixed-price, no-call audit that turns "it works" into a written report with checks, browser or PR evidence, screenshots or review signals, first fixes, and stop rules.

Best fit

Public AI-built app, demo, local web tool, repo, or public GitHub PR that needs launch or review proof.

Buyer gets

AgentProof report, route or PR evidence, score, blocking issues, first fixes, and clear stop rules.

Boundary

No calls, credentials, secrets, private customer data, private repo access, regulated work, or guarantees.

Buy only if it beats review churn.

The \$149 pass breaks even after **3 hours** saved at \$50/hour, or **1.5 hours** at \$100/hour. Current open-signal review-load sample: **27 low-proof PRs** and **4.5 estimated hours**.

Use the checkout handoff.

Start at the AgentProof checkout page, not direct Gumroad, so the AP audit reference, target, and post-payment handoff packet stay attached.

What gets checked

- Build, test, lint, and typecheck commands when available.
- Browser routes, screenshots, console errors, broken links, visible runtime errors, and basic accessibility.
- Public PR status checks, changed files, maintainer objections, and review-risk stop rules.
- Safe public/test-input scope only.

Blocking: one route failed runtime proof.

/issues: HTTP 200, severe console error, screenshot captured.

PR: maintainer objection found; do not push harder.

Fix first: repair proof gap before launch or review claims.

1. Buy

Use the \$149 AgentProof checkout handoff so the AP reference stays attached.

2. Send target

Use the buyer handoff after checkout so the AP reference and safe public-target packet stay attached.

3. Get report

Written delivery target is 72 hours after complete safe inputs.
